The quality of starting raw-material affects in gasification processes, the gas composition and also the yield in olefins. Greatest olefin content is produced during gasification of the fraction 200-300 C and of cetane. Gas with the greatest olefin content (24-38%) is produced at a residence time of 0.5-0.6 sec., to which (Chemistry-Physical, TT, v. 10, no. 3) (over)
